Masoneilan®
SVI® II AP
Advanced Performance
Digital Valve Positioner
bhge.com
Non-Contact Position Sensing Technology

BHGE’s SVI II AP (Smart Valve Interface, Advanced Performance) is a 32 bit microprocessor digital valve positioner with a local interface that controls a pneumatic actuator using a two-wire 4-20mA control signal. The instrument offers bi-directional communication using the HART® protocol. Its universal design offers ease of retrofit in place of existing analog positioners on Masoneilan or non-Masoneilan pneumatic actuators, either single-acting or double-acting.

Control

- **Non-Contact Position Feedback**
  The field-proven, non-contact sensor has no mechanical moving parts, resulting in a potentially long life-cycle and simplifying the mounting procedure. The design is compliant up to SIL2 per IEC61508.

- **Designed to Survive**
  With no moving parts, encapsulated electronics, stainless steel wetted components, positively pressured compartments, and a metal housing, the field-proven BHGEs' SVI II AP positioner is capable of handling tough environments and resisting the effects of vibration, temperature, and corrosion.

Dynamic Performance

- **Accuracy**
  The high resolution non-contact sensor, capable of measuring movements of 0.00015 percent, combined with the proven control algorithm, offers positioning performance yielding extreme flow control.

- **Responsiveness**
  The two-stage pneumatic system has a large flow capacity \( (C_v) \) for fast filling and purging of the actuator. This technology, combined with the advanced positioning algorithm, offers fast and accurate positioning to small or large setpoint changes in order to enhance process control.
Easy, Simple, Accurate

User Friendliness

- **Simplified Maintenance**
  BHGE has configured the SVI II AP positioner with modularity in mind to simplify the task of replacing components. The circuit board, LCD, I/P, and pneumatic relay can be replaced in minutes.

- **Increase Safety**
  The SVI II AP positioner is capable of remote access using the HART protocol or with the use of the Masoneilan VECTOR*, a wireless HART adaptor. But in the case where local intervention is necessary, the external explosion-resistant display allows for calibration and diagnosing operations without exposing wires to a potentially explosive environment.

- **Quick & Accurate Commissioning**
  The built-in auto-stop function accurately and repetitively sets the zero and span of the control valve while the built-in auto-tuning function sets the valve positioning parameters. The result is systematic and enhanced dynamic performance on any control valve.

- **Local Display with Pushbuttons**
  The optional explosion-resistant display is a user-friendly interface for SVI II AP positioner setup and calibration and monitoring operations and alarms. The LCD assembly can be retrofitted in the field.

Versatile

- **One Design Fits Many Applications**
  The instrument is capable of handling linear and rotary applications, either valve mounted or remotely mounted. In addition, the product’s label encompasses explosion resistant and intrinsically safe applications with FM, CSA, ATEX, and IEC approvals. The net effect is a reduction in inventory cost to support the processing plant.

- **Integrated**
  BHGE’s SVI II AP positioner supports eDDL, DTM, and system specific technology for integration with most asset management software programs and control systems. Such integration offers ease of commissioning and equipment diagnosis before impacting process control. As a result, the plant can be operational in less time with greater availability.

- **Low Voltage**
  The patented loop-powered circuitry requires 9 Vdc at 20 mA allowing compatibility with existing controllers and existing electrical barriers. Such low voltage requirements allow the plant to improve its existing infrastructure when migrating to digital valve positioners.

- **Position Transmitter**
  The loop-powered position transmitter is built-in with the use of solid state electronics without requiring external accessories or HART to analog converters.

- **Discrete Outputs**
  BHGE’s SVI II AP positioner is equipped with two configurable solid state switches capable of handling 24 Vdc up to 1 A. These switches are low-maintenance and reduce the need for external accessories.
Proven Technology

Housing
BHGE’s SVI II AP positioner housing is offered in aluminum or stainless steel. The aluminum version is chromated and has less than 0.5 percent copper content to resist harsh environments while the stainless steel version is made of solid 316L material for corrosive atmospheres. Furthermore, the electronic compartment is positively pressured to reduce external moisture ingress and condensation. The installation is accomplished via four external bolt holes. The design supports mounting and dismantling without exposing the wiring compartment to the atmosphere.

Magnetic Interference Protection
The housing has a built-in feature that protects the magnet array against debris. In addition, this protective feature shields the magnetic field from electromagnetic interferences.

I/P
The heavy-duty I/P with stainless steel wetted parts has a static coil surrounding the nozzle. As it receives an electrical signal from the electronic circuit, the static coil magnetizes the nozzle attracting the flapper towards the nozzle resulting in a pneumatic signal that actuates the relay. The I/P is built with a flow regulator to sustain a steady output against air supply disturbances.

LCD and Pushbuttons
The optional cover with external LCD and pushbuttons is explosion resistant for accessibility to the buttons in a hazardous area without the need for a hot work permit. Sophisticated circuitry detects the mechanical activation of a button, providing protection against false inputs.
**Pneumatic Volume Amplifier or Relay**

The pneumatic relay consists of a floating poppet valve assembly that modulates using the pneumatic signal from the built-in I/P. The poppet valve allows the incoming air supply to feed the actuator chamber or to vent the actuator chamber to the atmosphere. The large air flow passages offer fast response and operate against airborne contaminants without possible Joules-Thomson effect (ice formation).

**Magnetic Coupling**

The position of the valve is sensed with the use of two rare earth (permanent) magnets diametrically opposing each other. This type of magnet can maintain its strength and keeps its magnetic properties for many decades. The orientation of the strong magnetic field is detected through the wall of the housing by a Hall effect sensor located on the circuit board. This technology combined with a protective feature for the magnetic field and the magnets on the housing offers accurate positioning.

**Circuit Board**

The electronic circuit of BHGEs’ SVI II AP positioner is encapsulated in a silicone-based material and covered with anti-fungal coating to help survive in harsh environments. A series of heavy-duty, spring-loaded connectors offer wiring termination. Such military and aerospace connector technology resists the effects of cold flow (thermal contraction and expansion of the wire), vibration, and corrosion, resulting in a sustainable electrical connection.

**Pressure Sensors**

Five pressure sensors are built-in for online positioner and control valve diagnostics. These pressure sensors are factory calibrated and low-maintenance.
Versatile

The SVI II AP positioner is versatile and easy to implement by virtue of its universal design, dual-stage amplification system, and a sophisticated patented auto-tuning algorithm.
Electrical Implementation

Application Benefits

Remote Mount Application

Safety
- Allows the positioner to help create a safe working zone for personnel where hazardous and unhealthy substances or radiation may be present
- Improves physical accessibility to the positioner for valves in hard-to-reach locations

Control
- Extends duration of elastomers when installed in temperatures near or above product’s limit
- Increases robustness against harsh environments

Remote Positioner can be up to 300’ (90m) away
Integration Flexibility

Diagnostics

BHGE’s SVI II AP positioner offers three types of diagnostics — continuous, offline, and online.

The continuous diagnostics include self-monitoring of SVI II AP positioner operation, number of valve cycles, and distance traveled, hours of operation divided in three categories (time closed, near closed, and open) and a multitude of valve performance-related alarms.

The offline diagnostics allow for bench testing of the positioner and the control valve using a variety of tests built into the firmware and within ValVue® software. Such tests do override the incoming control signal and are to be performed on the bench or with the valve bypassed. A useful test is the high resolution Extended Actuator Signature because it quantifies the friction, the spring initial and final, and the seating profile.

The online diagnostics are performed during normal operation while the positioner is under control. Such diagnostics are non-intrusive for the operation of the control valve and offer a wealth of information as to the performance of the SVI II AP positioner and the control valve. The SVI II AP firmware continuously monitors key performance indicators and can provide alarms using HART or the built-in solid-state switches. When combined with Valve Aware®, the SVI II AP positioner offers a more comprehensive set of key performance indicators (KPIs) during normal operation.

Valve Signatures

ONLINE Valve Signatures

When coupled with Valve Aware, valve performance monitoring becomes possible while the process is running. Valve Aware is a software-based technology for monitoring and diagnosing the performance of any control valve during normal process operations. This solution for final control elements assists in improving plant integrity, plant efficiencies, and plant uptime, which may result in reduced operating expenditures and increased plant profitability.

SVI II AP- 2 3 1 2 1 1 2 3 4 3 1 1 2 1
Specifications

Safety Compliance:
• SIL2 Self Compliance Per IEC61508 section 2-3

Diagnostics:
• Five Pressure Sensors
• Total Travel & Number of Cycles
• Valve Operations (time open/time closed/time near closed)
• Offline Control Valve Signatures with ValVue Suite or Advanced DTM
• Online Friction with Valve Aware
• Field Upgradable Diagnostic Levels

Housing Material:
• Case / Cover: Aluminum ASTM 360 (std), 316L (optional)
• Paint(2): Grey Polyurethane (category C4 per ISO 12944-2)

Input Power and Signal:
• Power Supply (taken from 4-20 mA)
• Required Terminal Voltage: 9 Vdc at 20 mA
• Minimum Current Signal: 3.2 mA

Optional Output Signals:
• Position Transmitter: 4-20 mA - Two Wire Loop-Powered with 10-24 Vdc Compliance Voltage
• Two Configurable Digital Contacts: 30 Vdc, 1A

Input Signals:
• Valve Setpoint: 4-20 mA, 450 Ohms Input Resistance
• Remote Position Sensor: 10 k Ohms

Communication:
• HART Revision 5 Protocol (HART 6 Pending)

Ambient Temperature Limits:
• -58 to 185° F (-50 to 85° C)

Ambient Humidity Limits:
• 10 to 95 percent RH Non-condensing

EMC Conformity Standards:
• EN 61000-4-2, 3, 5, 6, 8
• IEC 8014-2, -3, -4

Actuator Travel Range:
• Linear Motion: 0.25" (6.4 mm) to 6" – standard mounting
  > 6" (50 mm) – extended mounting
• Rotary Motion: 18 to 140 degrees
• Travel Sensor Resolution: 0.0015 percent

Pneumatics:
• Air or sweet natural gas – regulated and filtered

Air Supply Pressure:
• Single-Acting: 20 to 100 psi max (1.4 to 6.9 bar)
• Double-Acting: 20 to 150 psi max (1.4 to 10.3 bar)

Air Delivery and Air Consumption:

Materials:
• I/P Motor and Relay are constructed of composite polymers and stainless steel (300 and 400 series)

Control Valve Mounting System:
• Material:
  - 300 Series SST Standard
• Valve Type:
  - Linear or Rotary Motion Control Valve
  - Single- or Double-Acting Actuator(3)
• Optional Remote-Mount Position Sensor Kit:
  - Remote Position Sensor (RPS) Assembly
  - Cabling For Up To 30 Meters (100 Feet)
  - Two inch Pipe Mount Bracket

Certifications:
• FM, CSA, ATEX, JIS, INMETRO, KOSHA, GOST, IEC
• Explosion Proof, Intrinsically Safe, Flame Proof, nL
• Enclosure protection: NEMA 4X / IP66
• CE MARK
